Dear Appetiser Team,

Appetiser's mission to scale from an Australian leader to a global force—while empowering every team member to shape that journey—resonates deeply with me. Your commitment to transparency, rapid growth, and building products that impact millions aligns perfectly with the kind of environment where I thrive.

In my current role as a Back-End Developer at Mermez, I've led the design and maintenance of RESTful APIs using Laravel and MySQL, optimizing complex queries to reduce data retrieval times by 25%. I've also implemented PHPUnit testing and CI/CD pipelines via GitHub Actions, ensuring code reliability and faster deployment cycles. These experiences directly align with your need for someone who can build scalable applications, write testable code, and contribute to high-performance teams.

Beyond my professional role, I've developed custom Laravel modules for hospital and blog management systems as a freelance developer. One project integrated AI-powered diagnostic tools, demonstrating my ability to adapt quickly and apply backend logic to real-world problems. While I haven't worked directly with Nuxt or Stripe, I've built payment integrations and am confident in my ability to learn new frameworks rapidly—especially in agile environments like yours.

I'm excited by the opportunity to contribute to a team that values personal growth as much as technical excellence. I'd welcome the chance to discuss how my experience and drive can support Appetiser's ambitious 10X growth goals.

Thank you for considering my application.

Best regards,
Yusuf User
